Networks Lab 11

**Q1. Create 2 LANs (wireless and wired).
Connect them through a router.
The wireless LAN will have class B IP
address and wired LAN will have class C
IP address, and both LANs will have
DHCP server.
Configure the network and test the
connectivity.**

Steps:

1. Configured the router using appropriate means
2. Then configured all the PCs accordingly to make the network workable.
